

# EARLY CAD DETECTION PROGRAM

## PROGRAM

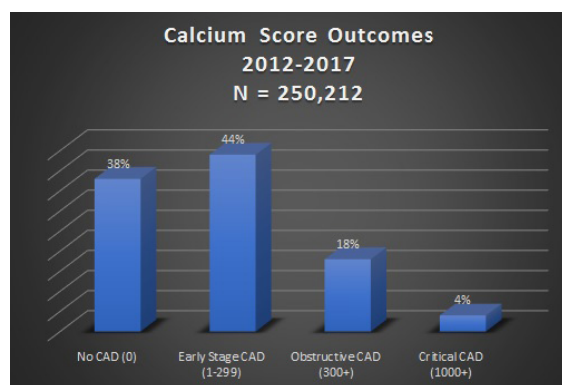

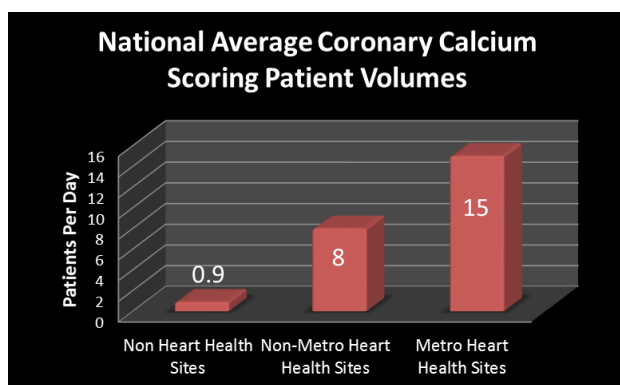

Adilstone Group partnering with National Heart Health Program to provide a 2 to 3 day Early CAD Detection Program. The program is “guideline supported, societally endorsed, and scientifically validated.” Using the ACC/AHA/ACR Guidelines leading Cardiologists have developed the World’s most widely implemented (100 sites and over 250,000 patients) and successful Early CAD Detection Program. This Program identifies CAD BEFORE the 1st symptoms, which for 50% are heart attack or death. The training meetings are in depth covering the “Best Practice” methods of a successful early detection program.

- Early detection/CAD screening emphasis
- Physician education: appropriate screening
- Primary Care/ Hospital/ Cardiology Triad of Care

## NATIONAL HEART HEALTH BENEFITS

- World’s largest and most efficacious early detection program
- ACC/AHA/ACR/ESC guideline based program
- Over 250,000 patients tested
- Our Q1 ROI performance average is \$200,000\*
- In over 100 hospitals and practices in 13 countries worldwide
- Identify CAD patients before the 1st symptoms, which for 50% are heart attack or death

### Turnkey Program Developed by World Recognized Heart Attack Prevention Leaders

\*we have yet to encounter a site that has not recovered 100% of their program cost in Q1
