

Scottsdale Healthcare was the first hospital in Arizona to acquire the da Vinci robotic surgical system.

### Urology Services

The Scottsdale Healthcare Urology Services is devoted to clinical urology care. We are available for support throughout each step of the process, from diagnosing urology disorders to performing urology treatment procedures. Our multidisciplinary urological team of physicians is dedicated to working for the best interest of our urology patients. Our team of experts provides comprehensive treatment of many types of urological problems. An individual patient is extremely important in making informed decisions about their treatment options.

For more information about urology services, please call 480-323-3400.

### Latest Advancements in Gynecologic Surgery

Scottsdale Healthcare's minimally invasive surgical gynecology program is pleased to announce their designation as a Center of Excellence in Minimally Invasive Gynecology (COEMIG) granted by the American Association of Gynecologic and Laparoscopists (AAGL) and the Surgical Review Corporation (SRC), two leading organizations that partner to promote excellence in minimally invasive gynecologic surgery among surgeons worldwide.

## Women's Health Services

The program serves women of all ages, focusing on continuity of care. This includes:

- Increased safety
- Fast recovery
- Expansion of minimally invasive gynecologic procedures demonstrate
- Consistent results
- Consistent evaluation at the Center of Excellence
- Collection of data on best practices

Our patients are the vision of excellence in Minimally Invasive Gynecology.

**Rest assured-on the right approach.**

Scottsdale Healthcare's minimally invasive surgical system is the latest technology. Minimally invasive robotic surgical procedures and other procedures.

For more information about our program, please call 480-323-3400.

We are the first in the United States.

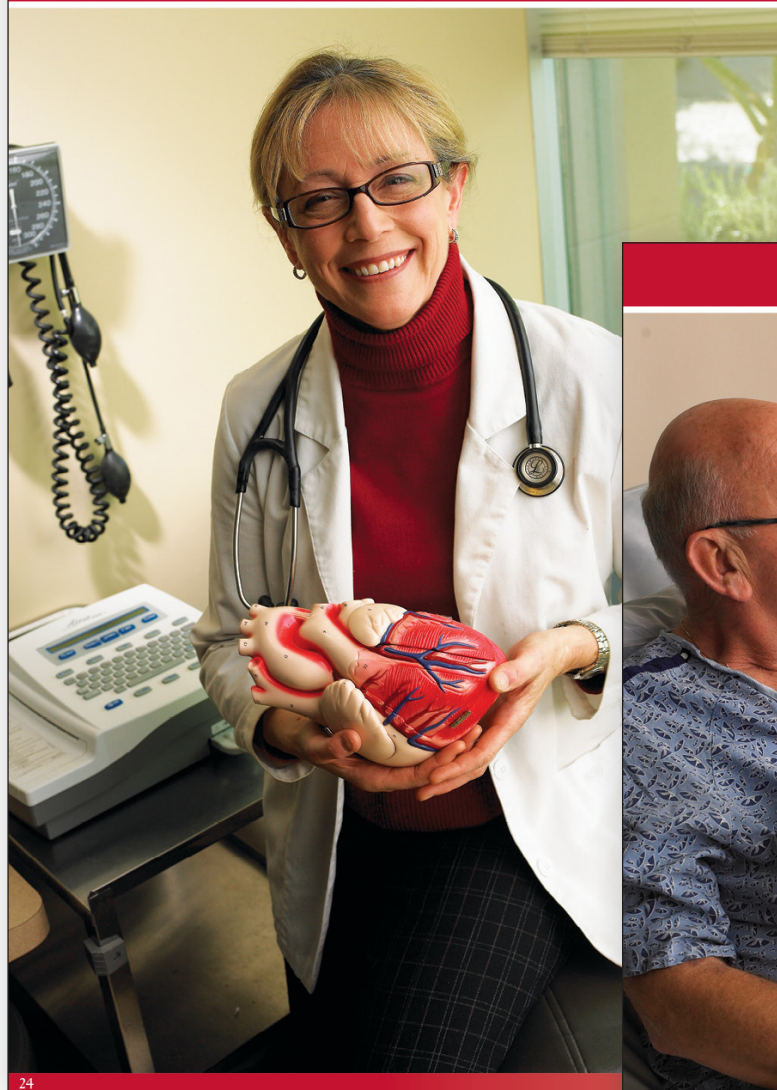

World-Class Patient Care

Major risk factors that cannot be changed such as **increasing age, male sex (gender) and heredity (including race)** all increase the risk of coronary heart disease and heart attack.

The more of these risk factors you have, the greater your chance of developing coronary heart disease. Since you can't do anything about these risk factors, it's even more important for you to manage the risk factors that can be changed.

Risk factors that can be managed, treated or controlled are factors such as

#### Nursing at Scottsdale

Scottsdale Healthcare is the exclusive designee of the American Credentialing Center (ACC) for Scottsdale Healthcare. It means Scottsdale Healthcare and Osborn Medical Center have all achieved additional outcomes. Our staff has been rigorously evaluated

### Comprehensive Spine Care

Whether you have a recent injury, unresolved pain or simply want a second opinion, Scottsdale Healthcare will provide you with the highest quality of spine care possible.

We offer both surgical and non-operative treatment options for a full range of spinal conditions. Our physicians are dedicated to staying on the forefront of the latest minimally invasive spine and orthopedic techniques. In fact, many of them travel the country teaching other orthopedic surgeons these innovative procedures.

We treat common traumatic spine injuries with minimally invasive techniques. The benefits of minimally invasive surgery include less scarring of muscles and soft tissues. Scottsdale Healthcare offers minimally invasive surgical imaging of a patient's spine during surgery. Instruments are placed through the patient's anatomy and then onto the spine for the entire operation. Because it allows the surgeon to see the spine without damaging delicate structures, minimally invasive spinal procedures are ideal for spinal fractures.
